IDEA9201 · ASSESSMENT 4 · DESIGN FICTION PROTOTYPE

HUSH

A home privacy utility from 2046.
Twenty Private Hours a month, shared by everyone on the Wi-Fi.

GROUP UNLIMITED · TUTORIAL 03 GROUP B (HELENA B)

Jinge Gao · Jing Wang · Di Luan · Yini Chen

Submitted 8 November 2026

Privacy, by the hour.

In 2046, tracking is part of the plumbing of every home. Apps, browsers, TVs and appliances share data by default, and that is simply how the internet works. HUSH is the box on the hallway shelf that can make it stop, for a while. Each household buys a monthly allowance of **Private Hours**. While a session is running, participating services stop tracking, profiling and sharing for every device on HUSH Wi-Fi. When the hours run out, nothing breaks. The Wi-Fi keeps working, and the data starts flowing again.

The fiction does not ask whether HUSH works. It asks what happens to people when privacy turns into a balance they have to spend. Which moments are worth an hour? Who in the house decides? And what happens to the searches made while everyone was saving time for later?

This document is written in two voices. The in-world artefacts (device, interface, quick-start guide, advertisement) speak as HUSH in 2046 and are shown without commentary. Process pages, marked with a kicker line at the top, explain how and why we made them.

CONTENTS

01	Faint signals, what-if and archetype
02	The world of HUSH: rules of 2046
03	Design development
04	Artefact: the HUSH Home device (physical model)
05	Artefact: the HUSH Home interface (Figma prototype)
06	One evening in 2046: the scenario
07	Instruction set: HUSH Home Quick Start Guide
08	Advertisement: magazine insert
09	Critical questions
10	Presentation slides (Week 11)
11	Generative AI usage record and prompts

Five things already happening.

We started from present-day signals that are small on their own. HUSH is what you get if all five keep growing at once and nobody stops them.

S1
Tracking follows us across devices
Advertising IDs, logged-in accounts and shared home networks let a search on a laptop shape the ads on a phone and the suggestions on a TV.

Cross-device graphs, smart-TV viewing data, "recommended for you" everywhere.

S2
The home is a network of reporting devices
Routers, speakers, TVs and appliances are connected by default. Each one talks to its maker, and the router is where all of it leaves the house.

Connected appliances, smart-home hubs, ISP-supplied routers with apps.

S3
Owning turns into subscribing
Software, music, storage and even hardware features are rented month by month. A feature you already own can sit locked until you pay.

Subscription-unlocked car features, cloud storage tiers, app "premium" plans.

S4
Privacy is already for sale
"Pay or consent" models offer an ad-free, less-tracked tier for a monthly fee. Privacy tools are sold as add-ons to the services that track us.

Paid ad-free social media tiers, VPN bundles, email masking, data-removal services.

S5
We ration invisible resources by the number
Prepaid electricity, mobile data allowances and screen-time limits teach us to budget things we can't see by watching a number on a screen go down.

Prepaid meters, data caps, "you have 2 GB left this month".

PROJECTING FORWARD · A PLAUSIBLE PATH, NOT A PREDICTION

2026
Today
Ad-free tiers cost extra. Privacy tools are add-ons. Data caps and prepaid meters are normal.

~2032
Privacy bundles
Internet providers bundle "tracking-free" modes with their routers, sold as a monthly upgrade.

~2038
Participating services
Major platforms agree to honour a household "private" signal, but only for paying networks.

~2042
Metered privacy
Unlimited plans become too expensive. Households switch to hour allowances, like data plans.

2046
HUSH Home
20 shared Private Hours a month, $19.99. A white box on the hallway shelf counts them down.

WHAT IF

What if privacy was no longer a right, but a subscription, metered by the hour and shared by the household?

Why this question

Signals S1 to S4 already put a price next to privacy. S5 shows how people behave once something is metered: they save it, ration it and argue about it. Put together, privacy stops being a default and becomes a budget. The interesting design question is no longer "is my data safe?" but "is this search worth one hour?"

We set the world about 20 years ahead, in 2046, close enough that HUSH feels like an ordinary purchase rather than science fiction. Nothing in the device is magic. It depends on a **participating-services protocol**: during a paid session, services agree to stop new tracking for the household. This is our fictional assumption. Today's routers cannot do this.

FAMILIAR ARCHETYPE

Wi-Fi router × prepaid meter

HUSH borrows its form from two objects everyone already lives with:

BORROWED FROM	WHAT IT BRINGS
Home Wi-Fi router	Sits on a shelf and is ignored. It is the one point every device passes through, so it is a believable place for household privacy to be switched on and off.
Prepaid utility meter	A big countdown number, a top-up price and a renewal date. It turns an invisible resource into something you can see running out.
Subscription app	Plans, upgrades, monthly reports and a small "Buy 1 hour" button that is always within reach.

The device stays deliberately boring: a white box with a timer. We wanted the critique to sit in the everyday rules around it, not in a dramatic gadget. This answered the W11 feedback to avoid a generic, feature-heavy smart-home dashboard.

Mundane, not dystopian

Nothing in the world is evil. HUSH is a helpful product with fair-sounding rules, and that is why it is unsettling.

Diegetic first

The device, interface, guide and ad speak only as HUSH would in 2046. The critique has to come through their own words and numbers.

Questions, not answers

Visitors press Pause themselves. The consequence shows up on someone else's screen a few minutes later, and they connect the two.

The rules of 2046.

RULE	IN THE WORLD OF HUSH
Plans	HUSH Personal 10 h · $9.99 / month HUSH Home 20 h · $19.99 / month HUSH Home+ 40 h · $29.99 / month
Extra time	Add 1 Private Hour for $3.99 (60 minutes, whole home)
Shared clock	One hour covers every device on HUSH Wi-Fi at once. Eleven devices do not use eleven hours.
Pause	A session can be paused to save time. While paused, tracking and profiling are active again.
Subscribe first	Protection cannot start until a plan is paid for.
Household	Any member can request a pause. Others can choose *Keep me private* or *Step out*.
Running out	At 00:00 the Wi-Fi keeps working. Default sharing resumes on every device.
The past	Buying more time later never removes data that was already collected or profiles that already exist.
Renewal	Hours renew monthly. Unused hours expire.

What HUSH does not do

HUSH does not listen to the room, read messages or hide what you deliberately send. A booking, an email or a submitted form still reaches its service. HUSH only stops *new* tracking, profiling and identity-linked sharing by participating services, and only on its own Wi-Fi.

Where the friction lives

We kept the rules plain and ordinary on purpose. The critique comes from the way they interact:

- **Pausing to save hours** means choosing to be tracked now so you can be private later.
- **One shared clock** means one person's private moment spends everyone's allowance.
- **The past is permanent**, so paying only ever protects the future.
- **The session log** keeps the start and end times of every session "for billing", which records when a household wanted privacy.

From wall hub to hallway shelf.

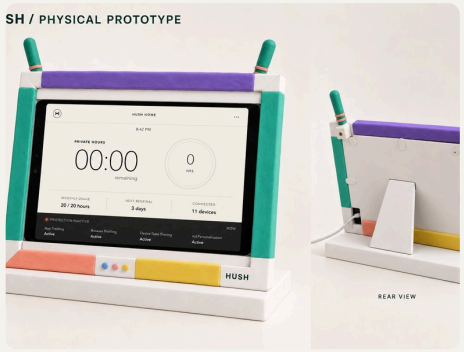

W11: circular wall hub. Dark smart-home panel, 0:00 remaining. Feedback: strong concept, but it read like a generic future Nest, and the audience had nothing physical to touch.

Router with a screen. We moved to a tabletop router with a live screen: an iPad in a white frame, so people can actually press Pause.

Colour and antennas. AI concept sketches tested clay antennas and colour blocking on the frame. They looked craft-made, not like a product.

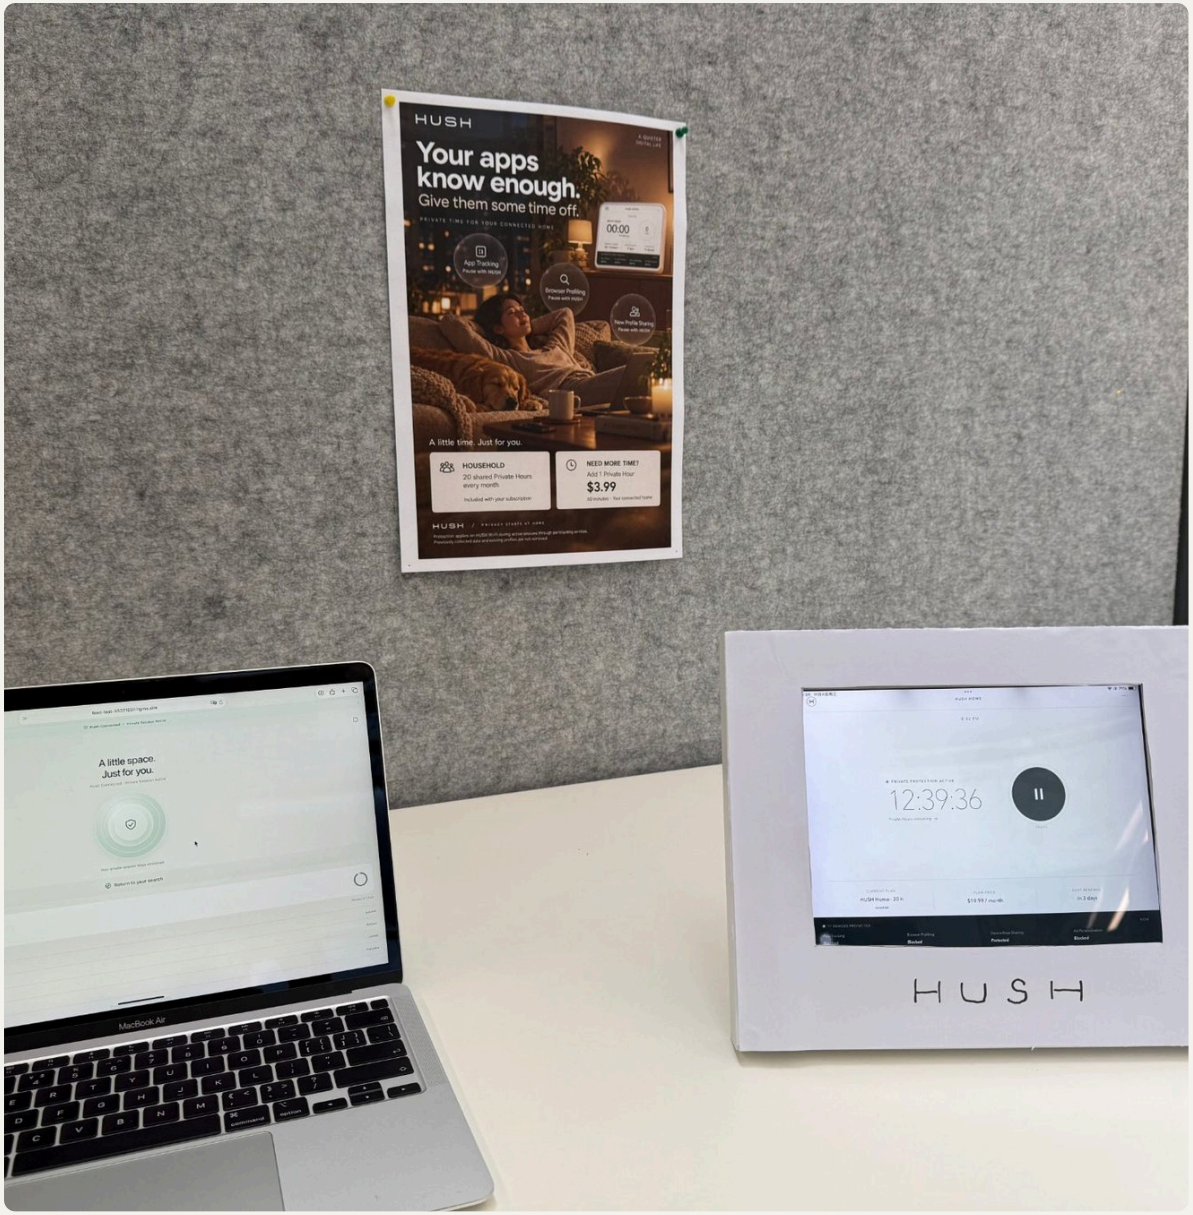

Colour-blocked frame. Explored, then dropped. A quiet white object fits a utility that people stop noticing.

Final: a white, antenna-free device

The built model is a white frame and card mat around an iPad running the final Figma prototype, with the HUSH wordmark below the screen. The interface moved from a dark dashboard to a cream, mostly typographic screen: one big countdown, one button, and a black band listing what is being shared right now. The fewer features it shows, the more the single number matters.

Concept images in this row were AI-generated as sketches during development; see the AI usage record. The photograph on the left is of the real model.

Exhibition setup. HUSH Home on the desk with protection active, the laptop running the browser simulation, and the campaign poster on the wall.

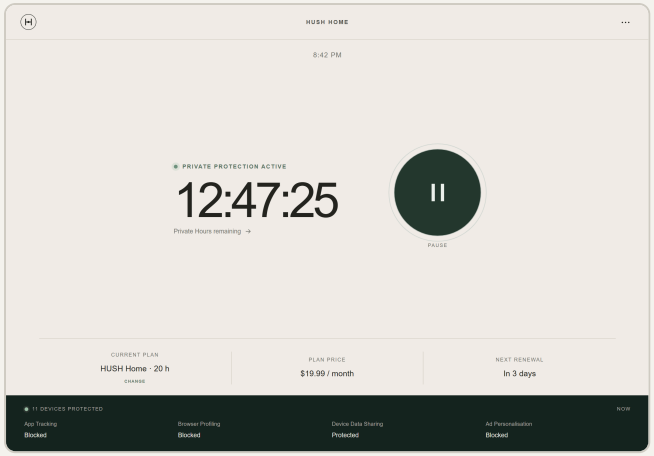

Front, hours exhausted. 00:00 remaining, 20 / 20 hours used, renewal in 3 days, 11 devices connected. Protection is inactive, and every category in the black band reads *Active*.

How it is made

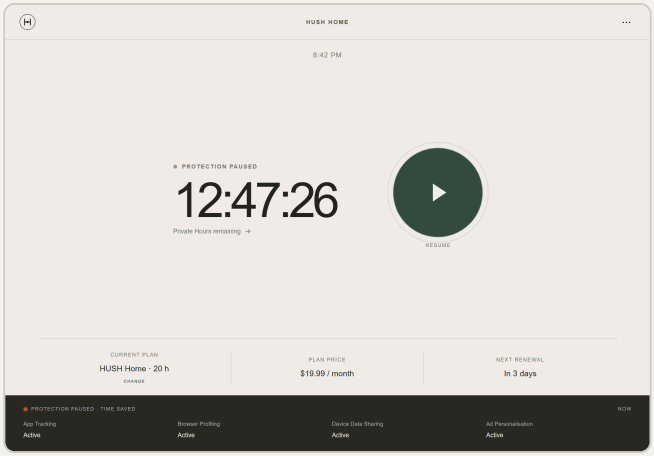

White photo frame, white card mat strips to close the gaps above and below the screen, and an iPad running the final Figma prototype full screen. The frame rests on a rigid stand so the screen stays touchable.

What visitors do

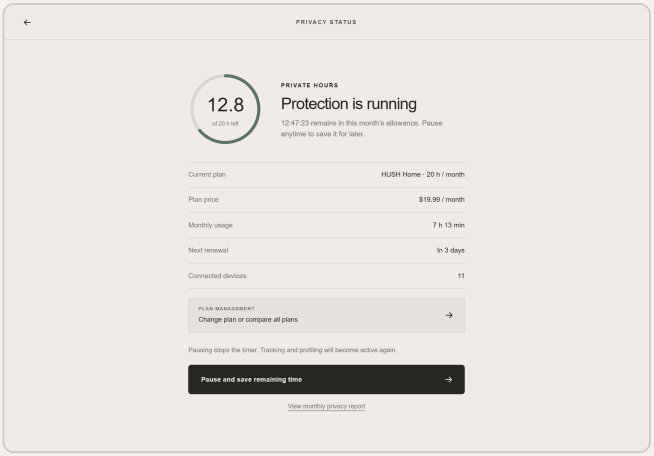

Press **Pause** and watch the black band switch from *Blocked* to *Active*. Open the hours ring, compare plans, read the monthly report. Then search for a job on the laptop next to it.

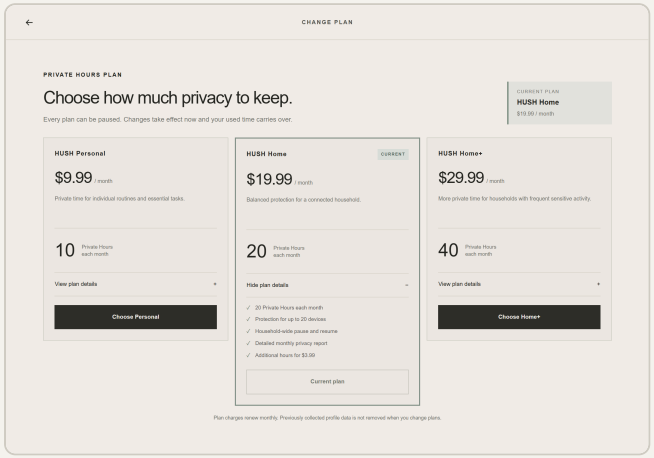

Home, protection active. 12:47:25 left this month. One button: Pause. "11 devices protected"; every category is Blocked.

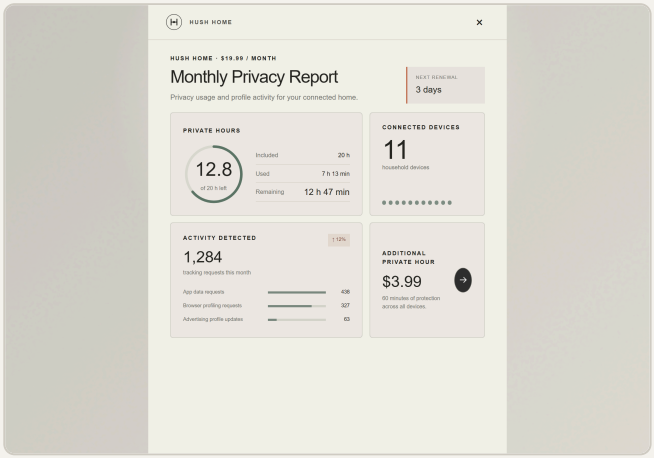

Paused, time saved. The clock stops, and so does the protection. App tracking, profiling, data sharing and ad personalisation are all Active again.

Privacy status. 12.8 of 20 h left. "Pausing stops the timer. Tracking and profiling will become active again."

Change plan. "Choose how much privacy to keep." Personal 10 h, Home 20 h, Home+ 40 h. Small print: previously collected profile data is not removed.

Monthly privacy report. 1,284 tracking requests this month (up 12%), 63 advertising profile updates, and the $3.99 extra hour one tap away.

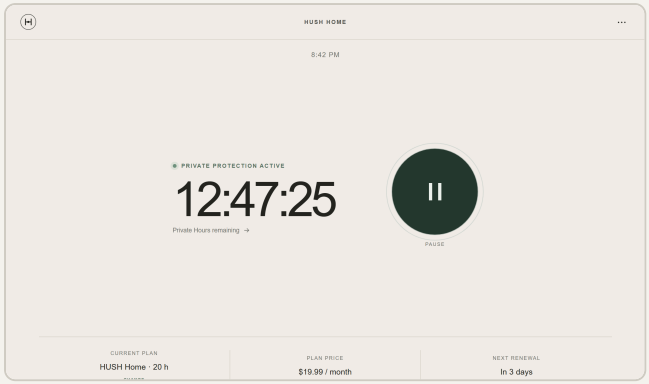

Interactive prototype

Built in Figma and run full screen on the iPad inside the physical model. All screens on this page are captured from the live prototype.

`banner-dish-90173388.figma.site`

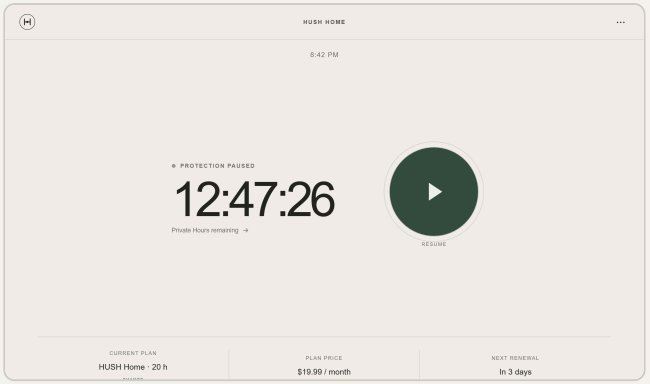

The interface never says privacy is a right, and never says tracking is bad. It only reports quantities: hours, devices, requests, dollars. That neutrality is the point.

One evening: saving time, spending privacy.

01 · 8:42 PM

Three days before renewal, the household has 12 h 47 min left. Protection is running.

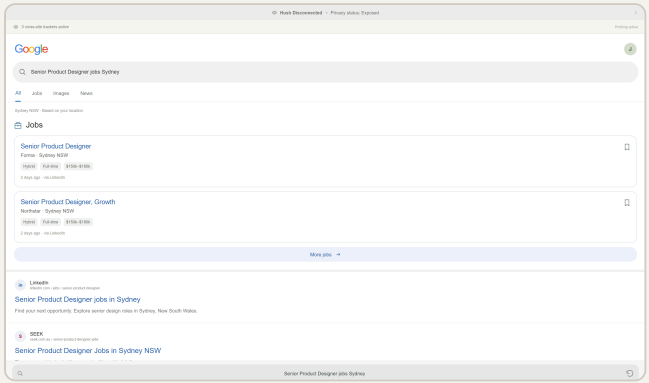

02 · PAUSE

J. pauses HUSH to save the remaining hours for the weekend. It feels responsible: "time saved".

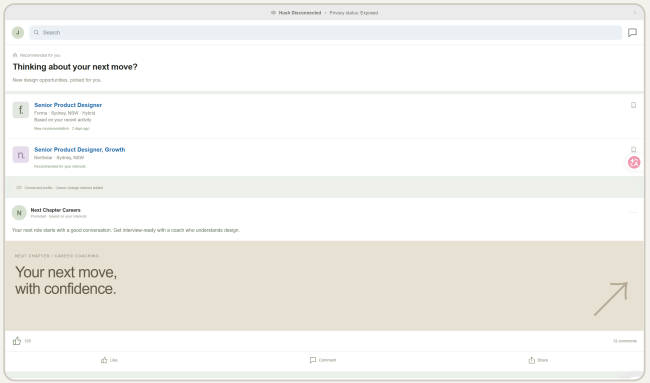

03 · HUSH DISCONNECTED

On the laptop, J. types a search they haven't told anyone about: *Senior Product Designer jobs Sydney*.

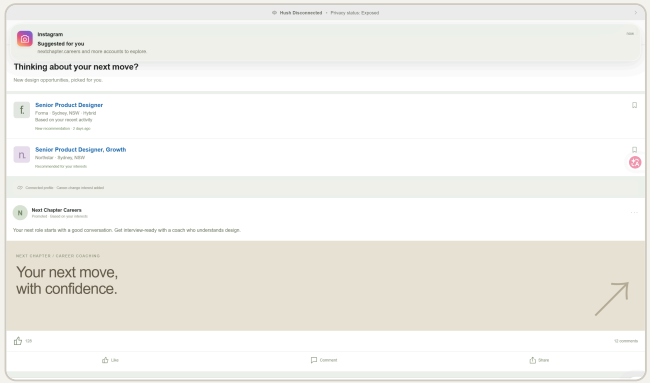

04 · PROFILING ACTIVE

The results page notes "3 cross-site trackers active". Jobs are shown "based on your location".

05 · PROFILE UPDATED

On LinkedIn, the connected profile now reads **"Career-change interest added"**. A career coach is promoted "based on your interests".

06 · EVERYWHERE

Instagram suggests *nextchapter.careers*. Resuming HUSH now protects the next search, but this one is already on the record.

07 · INSTRUCTION SET

HUSH Home Quick Start Guide

The in-box booklet: eight A5 pages, shown two to a spread. It covers setup (subscribe before you start), pausing, the monthly report, how a household shares one clock, what happens at 00:00, troubleshooting (malfunction scenarios), and the small print.

Keep it near your router

Meet your screen

1 **Private Hours remaining**
One balance for the whole home.

2 **Start / Pause**
One tap for every connected device.

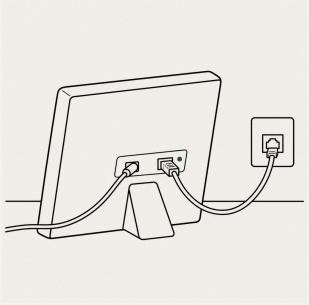

3 **Plan, price and renewal**
Tap *Change* to compare plans.

4 **Live status**
What is blocked, or active, right now.

Protection active · Paused · time saved · Unavailable · 0 hours

SET UP · ABOUT 5 MINUTES

Get started

01

Connect

Plug the network cable into your wall socket and the power adapter into the back of HUSH. The screen lights up in about a minute.

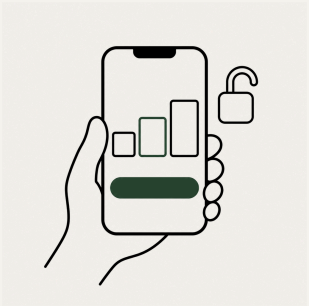

02

Join HUSH Wi-Fi

Scan the code on the screen with your phone to join HUSH Wi-Fi and download the HUSH app.

Mobile data and other networks are not covered.

03

Choose a plan

Private Hours are only available with an active plan. Choose one in the app and confirm payment. Until then, the screen shows *Choose a plan to start* and the start button stays locked.

	HUSH Personal	HUSH Home	HUSH Home+
Private Hours / month	10	20	40
Devices covered	up to 10	up to 20	up to 40
Monthly price	$9.99	$19.99	$29.99

All plans: additional Private Hours $3.99 each · change or cancel anytime in the app.

EVERYDAY USE

Use your hours

04

Start a Private Hour

Tap ▶. The household timer starts counting down. App tracking, browser profiling, identifiable data sharing and ad personalisation are blocked on participating services, for every device on HUSH Wi-Fi.

05

Pause to save time

Tap **II** when you are done. Unused time stays in this month's allowance. Someone else still browsing? See *Sharing with your household*, next page.

06

Check your monthly report

Tap the HUSH logo on the screen to see hours used, tracking requests detected and advertising profile updates across your home.

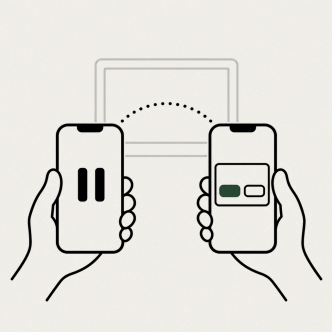

BEFORE YOU START A SESSION

Is this worth an hour? One Private Hour is 60 minutes for the whole home, not for each device. Most households save their hours for:

Health questions · Banking · Job searching · Personal messages · Gifts & surprises

ONE HOME, ONE TIMER

Sharing with your household

Private Hours belong to the whole home. While protection is on, every device on HUSH Wi-Fi is covered and the household balance counts down — whether one person is using it or five.

A Pause requests

If you tap Pause while other members are still active, they receive a request: "*Someone at home wants to pause Private Protection.*" If nobody answers within 30 seconds, the home pauses.

B Keep me private

Any active member can tap **Keep me private**. Protection stays on for the whole home and the timer keeps running for everyone.

C Step out

Done, but don't want to stop anyone else? Tap **Step out** in the app. Your device leaves the session and is no longer protected. The household timer keeps running.

D Member limits

The account holder can set a monthly limit for each member in *Settings › Household*, so one person can't use the family's hours.

HOUSEHOLD TIP

Agree on a routine. A session someone else keeps open still counts against everyone's hours.

WHEN THINGS DON'T GO AS PLANNED

When your hours run out

00:00

- The status light turns coral: *Private Protection Unavailable.*
- Wi-Fi keeps working. Nothing switches off.
- Each service returns to its normal tracking and sharing settings.
- Add 1 Private Hour for $3.99, change plan, or wait for renewal.

Troubleshooting

The start button is greyed out.
Your household has no active plan, or your last payment didn't go through. Check *Plans & Billing* in the app.

My phone says "Hush Disconnected" but the screen says protection is active.
Your phone is on mobile data or another network, or you tapped *Step out*. HUSH only covers devices in the current session on HUSH Wi-Fi.

My phone and the router show different hours remaining.
Displays sync every few minutes. The router screen shows your household's official balance.

I paused, but the timer is still running.
Another member tapped *Keep me private*. Use *Step out* to leave the session yourself.

My job recommendations changed after one search.
Activity outside a Private Hour is shared under each service's normal settings. Starting a session later does not remove profiles that were already updated.

A website still knew who I was during a session.
Information you choose to send — logins, bookings, payments, messages — still reaches that service. Protection is not anonymity.

GOOD TO KNOW

The small print

— Private Hours are available only with an active HUSH plan. Plans are billed monthly in advance to the household payment method and renew automatically. Unused Private Hours expire at renewal.

— HUSH Personal: 10 Private Hours, up to 10 devices, $9.99/month. HUSH Home: 20 Private Hours, up to 20 devices, $19.99/month. HUSH Home+: 40 Private Hours, up to 40 devices, $29.99/month.

— Additional Private Hours: $3.99 each (60 minutes, whole home). Additional hours start immediately.

— One Private Hour is counted once for the whole household, however many devices or members are in the session. Time keeps counting while any member keeps protection on.

— Pause requests expire after 30 seconds. A member who steps out of a session is not protected for the remainder of it.

— Protection applies to new tracking, profiling and identifiable data sharing by participating services on HUSH Wi-Fi during an active session. Participating services are listed at hush.home/participating and may change monthly.

— Previously collected data and existing profiles are not removed by starting a session, buying additional hours or changing plans.

— HUSH does not listen to your home and does not read the content of your activity. Session start and end times are retained for billing and service improvement.

— Emergency services may access your connection at any time, including during a Private Hour.

08 · ADVERTISEMENT · FULL-PAGE MAGAZINE INSERT

"Your apps know enough. Give them some time off."

Where people meet it

A full-page insert in a 2046 home and lifestyle magazine. The same artwork runs as an in-store poster beside the router shelf at electronics retailers. It sells HUSH the way routers and meal kits are sold today: cheerful, practical, and with the price up front.

What the ad shows, and what it leaves out

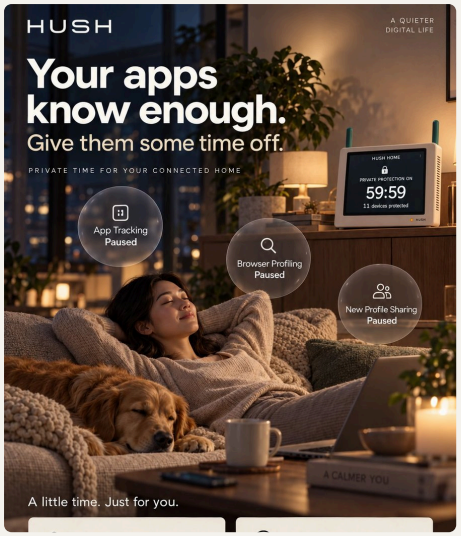

The hero device is shown at **00:00**, with "Protection inactive" and every category *Active*. The ad treats running out as normal, even friendly: "Need a little longer? Add 1 Private Hour, $3.99." The three steps read **Choose a Plan → Take a Pause → Get Your Time Back**. In the ad, privacy is something you take a break into, not something you live in.

The fine print

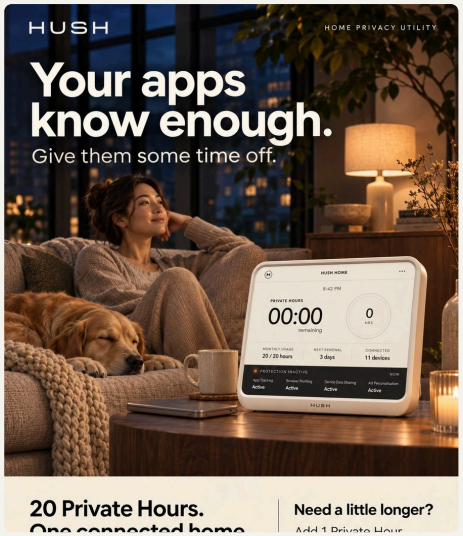

> *HUSH Home plan $19.99/month includes 20 shared Private Hours. Additional hours $3.99 each (60 minutes, whole home). Protection applies on HUSH Wi-Fi during active sessions through participating services. Previously collected data and existing profiles are not removed.

The asterisk on "20 Private Hours" carries the critique: the hours are shared, they depend on other companies taking part, and they cannot undo the past. Every number matches the interface and the quick-start guide.

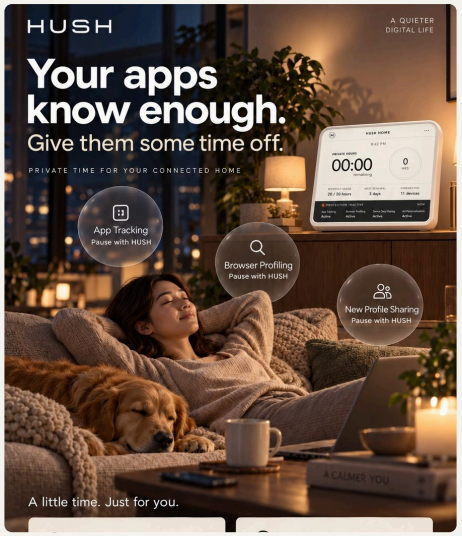

One campaign, several placements.

Exhibition poster. Warm night-time lifestyle version, printed and pinned above the model at the showcase.

Lifestyle magazine page. Same line, quieter type, with the 00:00 screen in a living room.

Product shot. First version of the white, antenna-free finished device.

How the insert was iterated

Jinge sketched the final layout. The poster was then iterated with AI image generation over six rounds, each with written feedback:

v2 · swap the photo steps for silhouette icons, remove the black band behind the hero, show ethernet ports on the back
v3 · rebuild on the new layout sketch
v4 · "How It Works" redone as minimal 3D, not hand-drawn
v5 · remove italics, rename step 1 "Choose a Plan", fix punctuation, add fine print
v5c · back view redrawn so the stand and cable no longer hide the ports

v2

v3

v4

v5

v5c, final

Questions HUSH leaves on the shelf.

We don't answer these. The artefacts are built so that visitors reach them by using the device, not by reading a statement.

Q1 · SAVING

Is pausing to save hours a privacy choice or a tracking choice?

The Pause button is the most responsible-feeling control on the device, and it is also the one that switches tracking back on. The scenario turns on that moment.

Q2 · WORTH

Which moments are "worth an hour"?

A job search, a health question, a relationship, a late-night worry. Once privacy has a price, people start ranking their own lives by it. The guide even teaches how.

Q3 · HOUSEHOLD

Whose privacy is it when the clock is shared?

One person's private moment spends everyone's allowance. *Keep me private* and *Step out* are polite settings for an argument the household will have anyway.

Q4 · AFFORD

Who can afford to be private?

Personal, Home and Home+ turn privacy into a tier. Households that are already stretched will be tracked the most, and the report will show it as a number that grows each month.

Q5 · PERMANENCE

What does paying actually buy?

Only the future. Every plan page and the fine print say it plainly: previously collected data is not removed. Privacy becomes something you can only buy in advance.

Q6 · METADATA

Does privacy itself leave a trace?

HUSH keeps the start and end time of every session "for billing and service improvement". A log of when a household wanted privacy may say more than the searches would.

10 · PRESENTATION SLIDES

Week 11 presentation

"UNLIMITED: Visitors from 2046". The original Week 11 deck, included unchanged as presented. It shows the earlier wall-hub version of HUSH. The device, interface and campaign above are the revised versions made after that presentation's feedback.

How AI was used, and what we decided.

AI was used as a sketching, drafting and image-production tool. The team made every decision about the world: the what-if, the scenario, the plans, prices, hours, household rules and fine print. The physical model and its photographs are our own work. All text that appears inside AI-generated images was checked against the world rules, and images were regenerated until the wording was correct. The full prompts follow (P1–P14). The project repository keeps the working history.

OUTPUT	TOOL	WHAT THE AI DID	WHAT THE TEAM DID	PROMPT
Concept, scenario critique and world-rule notes	AI chat assistants used by team members during development; summaries kept in the project repository	Brainstormed scenarios, questioned causal logic, drafted working documentation	Chose the what-if and the job-search scenario; rejected AI-proposed scenarios (automatic parent, roommate and employer alerts); set every price, hour and rule	—
Physical concept sketches (design development page)	AI image generation	Concept renders of frame, mat and colour options	Built the real model by hand (frame, card mat, stand, iPad). Only the photographs show the artefact	P1
Earlier advertisement drafts and exhibition poster	AI image generation	Generated imagery and in-image type	Wrote the copy lines and numbers; selected, printed and exhibited the lifestyle poster	P2–P6
Final magazine insert (v2 to v5c)	Codex (OpenAI) image generation, run from Claude Code (Anthropic)	Generated and edited the poster images from Jinge's layout sketch; Claude wrote each prompt from her feedback	Jinge drew the layout and gave feedback each round (silhouette steps, no hand-drawn style, no italics, fine print, back view). All in-image text was checked word by word	P7–P12
Quick-start guide: text and layout	Claude (Anthropic) in Claude Code	Drafted the booklet text and HTML layout from the Figma prototype and world rules	Jinge set the new rules (subscribe before use; what happens when one member wants to pause and others don't) and reviewed the draft	Requests in chat
Quick-start guide: illustrations (9)	Codex (OpenAI) image generation	Line illustrations with no text, using a photo of the real model as reference	Selected and placed the images	P13–P14
This compiled document	Claude (Anthropic) in Claude Code	Drafted the process text and layout; captured the prototype screens automatically from the live Figma sites	Jinge directed structure and content; the team reviewed before submission	Requests in chat

P1 Physical prototype concept sketches

HUSH-Physical-Prototype-Prompt.txt

Use case: product-mockup.
Create a realistic industrial design concept photograph for a student-buildable HUSH home privacy Wi-Fi router physical prototype, using an actual ordinary WHITE PICTURE FRAME surrounding a landscape-oriented iPad. This is a practical fabrication reference, NOT a futuristic manufactured gadget.
Composition: one landscape design presentation image on a warm off-white seamless studio background. Main front three-quarter view occupies left 72%; smaller rear three-quarter view of the SAME object occupies right 28%, visually separated by whitespace, both fully visible. Heading at top left only: "HUSH / PHYSICAL PROTOTYPE". Small caption below rear view: "REAR VIEW". No elaborate annotations.
Main object: a roughly 30 cm wide by 24 cm tall conventional matte white rectangular photo frame, visible neat 45-degree mitered joints, 2.5 cm wide flat white frame rails with straight outer corners. Landscape iPad recessed behind frame opening; real dark narrow iPad bezel visible inside, touch screen accessible, no glass in front. Frame is supported at slight backward tilt on a simple broad low muted sage green rectangular plinth with softly rounded edges, made of rigid foamboard with hand-smoothed pastel dough covering. Stable, achievable student craft construction, high quality but visibly ordinary materials. Two short off-white pastel-dough antenna rods, about 6 cm above frame and 1.2 cm thick, softly rounded tips, symmetric at REAR upper corners, both gently splayed outwards. Antenna feet attach to back of frame, never stuck to screen or floating. Subtle handmade dough texture; don't invent sculpted shells or injection molding. One tiny sage green dough circular indicator on lower white frame rail, beside a small neatly printed dark-green HUSH wordmark label. No external buttons blocking iPad.
Screen is deep forest green, minimal precise polished interface, readable exactly as follows: small "HUSH HOME" at upper left and "11 devices connected" upper right; "PRIVATE HOURS" centered; extremely large "00:00"; small "remaining"; small "20 / 20 hours used"; "Renews in 3 days"; a restrained amber status dot next to "Protection off"; one pale sage green rounded touch button reading "Start 1 Private Hour · $3.99". Keep 00:00 clearly dominant. No browser chrome, no generic app grid, no clock dominating.
Rear view must show the same ordinary white picture frame with its conventional fold-out rigid easel stand bearing the tablet weight on the sage plinth, a neat white foamboard back cover attached to FRAME with removable tabs, visible narrow open cooling gap and cutout for a white charging cable, two short antenna rods mounted at the two rear top corners. All structural parts visibly hard material; dough is decorative.
Style: believable physical model documentation, softly lit product photography with gentle natural shadows and precise construction details. White, muted sage, dark forest-green screen. Calm mundane consumer home device, not toy, not sci-fi, not glossy Apple marketing rendering. No people, no hands, no additional gadgets, no floating components, no curved bespoke enclosure, no LEDs all around frame. This is a proposed construction concept, not a photo of the user's actual frame.

P2 Advertisement draft: poster

HUSH-Advertisement-Poster-Prompt.txt

Use case: ads-marketing / product-mockup.
Create ONE finished, beautifully designed portrait advertising poster for HUSH, a near-future home privacy subscription. Portrait 2:3 aspect ratio, high resolution. This is the actual advertisement people encounter inside this fictional world, not a design concept board. All text in English. Use the supplied image ONLY as the product appearance reference; show ONE front three-quarter view of the device, no rear view, no reference board title. Keep reference device recognizable: white rectangular photo frame around a landscape iPad; teal green vertical sides and twin short teal antennas with coral bands; purple top rail; coral and yellow lower frame panels with three tiny blue/pink/yellow dots; white low pedestal. Neatly made tactile matte pastel dough texture, slightly handmade but carefully finished. Do not redesign into a seamless futuristic manufactured shell.
Art direction: premium yet approachable home-utility advertising, a large charcoal editorial headline, very generous margins, warm ivory paper background, quiet domestic light with soft late-afternoon window shadows. The multicolored product is the visual centerpiece. Design has a real typographic hierarchy and exceptional layout, NOT a rainbow background or generic AI flyer. A tiny slim cobalt blue rule and understated color accent may echo product. Single hero product photograph filling the middle 45% of the poster, seated on a very pale warm-white desk surface, with only a closed thin notebook and an out-of-focus neutral ceramic cup at far edge to establish ordinary student living. No people. Antennas fully visible. Keep product's cream-and-black screen legible: HUSH HOME, PRIVATE HOURS, large 00:00, 20 / 20 hours used, Renews in 3 days, 11 devices, dark lower status band marked PROTECTION INACTIVE. This is an exhausted allowance state, do NOT show active protection.
Poster layout:
Top left modest widely spaced logotype "HUSH"; top right very small "HOME PRIVACY UTILITY".
Below logo, very large elegant clean sans-serif headline with intentional 3 line breaks, exactly:
"Some moments
are worth keeping
to yourself."
Under the headline in restrained small type, exactly "For the plans you're not ready to share."
Then the hero product photograph, fully inside margins, strong natural shadows, with enough breathing room.
Bottom area with a thin fine horizontal divider, two aligned typographic columns:
Left column, large readable text exactly "One home." on first line and "20 Private Hours every month." on second line.
Right column has small "Need more time?" then bold larger "Add 1 Private Hour" and price "$3.99" beneath. No QR code, no invented website, no unsupported base subscription price.
At the very bottom, readable but genuinely small fine print, exact:
"20 shared hours included with a household subscription. Protection applies on HUSH Wi-Fi during active sessions through participating services. Previously collected data and existing profiles are not removed."
Ensure text is accurately spelled, keep all text inside safe margins, don't add any other slogans, don't add "prototype", don't print production annotations. The ad should feel welcoming while allowing the unsettling paid, limited privacy rule to reveal itself through ordinary commercial language.

P3 Advertisement draft: future product

HUSH-Advertisement-Future-Product-Prompt.txt

Edit this HUSH advertisement poster. Keep its excellent existing portrait layout, English headline, all marketing text and prices, font hierarchy, ivory background, soft warm domestic lighting and desk setting. CHANGE THE HERO DEVICE radically: replace the handmade photo-frame-and-clay student prototype with a plausible fully manufactured, finished HUSH consumer home privacy Wi-Fi router sold in 2046. The advertisement depicts the real product in its fictional world, not a physical model or craft object.
New hero device design: a sophisticated wide landscape rectangular router with a 4:3 integrated touch display, a unified continuous off-white matte PC/ABS housing with precise gently rounded corners, approximately 28cm wide, 22cm high and 4cm deep, slightly tilted backwards on a low integrated stable plinth. The overall body and rear enclosure are designed as a real router with subtle precise side ventilation slots, visible modest depth, a refined flush display with a thin uniform inset border. Two symmetrical slim muted deep-teal antennas extend neatly from rear corners, short realistic manufactured rods with precision hinges. One extremely small coral amber indicator light sits on the lower bezel beside a tiny printed HUSH logo. Use only refined off-white, deep muted teal antenna accents and a tiny amber indicator; remove ALL clay, colorful panels, purple/yellow strips, frame miter joints, easel stand, uneven textures, three decorative colorful dots, and craft materials. Do not show a naked iPad or picture frame. Visually calm and credible as a domestic utility meter/network appliance, finished mass-produced consumer hardware photographed beautifully, not sci-fi magic, no glowing neon or holograms.
Device screen retains the SAME cream and black HUSH HOME privacy meter interface: large dominant 00:00 remaining; 20 / 20 hours used; Renews in 3 days; 11 devices; circular gauge reading 0 HRS; dark footer PROTECTION INACTIVE with four tracking categories Active. Keep this as actual digital screen pixels inside manufactured device, no app browser chrome.
Exact existing poster text to preserve:
HUSH
HOME PRIVACY UTILITY
Some moments
are worth keeping
to yourself.
For the plans you're not ready to share.
One home.
20 Private Hours every month.
Need more time?
Add 1 Private Hour
$3.99
Fine print: 20 shared hours included with a household subscription. Protection applies on HUSH Wi-Fi during active sessions through participating services. Previously collected data and existing profiles are not removed.
Maintain legibility, safe margins, natural product proportions and sharp commercial photography quality. ONE hero product, no comparison inset. A convincing in-world advertisement for a shipping future product.

P4 Advertisement: lifestyle (exhibition poster)

HUSH-Advertisement-Lifestyle-Prompt.txt

Use case: ads-marketing.
Generate ONE finished portrait 2:3 HUSH advertising poster. Image 1 is the PRIMARY art-direction and layout reference: follow its rich cinematic evening home photography, big white typography over dark negative space, aspirational emotionally relaxing household scene, subtle translucent glass information bubbles and neatly organized cream commercial offer cards at bottom. This should look like a beautifully art-directed real home-technology advertisement, polished and immersive, not a product sheet.
Image 2 is ONLY the reference for the new manufactured HUSH ROUTER appearance: off-white unified rectangular housing with integrated landscape screen, two short deep teal antennas, small indicator and side ventilation. No craft model, no photo frame, no clay. DO NOT use the circular wall thermostat from Image 1.
Make a new domestic night scene: a young adult East Asian woman comfortably reclining on a textured oatmeal sofa, relaxed with eyes closed and an anatomically natural comfortable pose, a golden retriever resting beside her, a closed or partially open laptop near her and a mug on coffee table. Warm amber lamp, dark blue evening windows with city bokeh, softly blurred indoor foliage and beautiful layered depth. Arrange the HUSH router prominently on a waist-height sideboard at the upper-right/mid-right of the poster, fully supported physically, naturally fitting into the room. Device is a major, clearly visible advertising hero, not hidden, and does not float on wall. Keep face, dog and product unobscured.
Device screen: near-black/deep charcoal with light text "HUSH HOME", a small lock icon, "PRIVATE PROTECTION ON", a large dominant "59:59", and "11 devices protected". This is an active extra one-hour session. Maintain manufactured off-white rectangular body from Image 2, warm ambient lighting, slender teal antennas, subtle shadow.
Typography and layout:
Top left a wide-tracked thin modern wordmark "HUSH". Top right small "A QUIETER DIGITAL LIFE".
Upper left huge clean white sans-serif headline, exactly:
"Your apps
know enough."
Under headline a lighter cream line, exactly "Give them some time off."
Then a small widely tracked line "PRIVATE TIME FOR YOUR CONNECTED HOME".
Use exactly THREE subtle translucent smoked-glass circular advertising overlay badges, each with a simple appropriate thin white icon and two lines of accurately spelled readable text:
"App Tracking" / "Paused"
"Browser Profiling" / "Paused"
"New Profile Sharing" / "Paused"
These bubbles are clearly advertising graphic overlays, not literal holograms in the story. Place them carefully in open areas around the scene, never obscuring eyes/face or router screen, never overwhelming lifestyle photography.
Bottom quarter: warm dark gradient to support text, a small white phrase "A little time. Just for you."
Two large balanced cream rounded rectangular cards with precise readable typography:
Left card:
"HOUSEHOLD"
"20 shared Private Hours"
"every month"
"Included with your subscription"
Right card:
"NEED MORE TIME?"
"Add 1 Private Hour"
"$3.99"
"60 minutes · All connected devices"
Do NOT add 80 hours, unlimited plans, $14.99, $29.99 or $59.99. No invented base subscription price.
Below cards a minimal fine white footer "HUSH / PRIVACY STARTS AT HOME."
And readable small disclaimer across bottom:
"Protection applies on HUSH Wi-Fi during active sessions through participating services. Previously collected data and existing profiles are not removed."
All text must be accurately spelled, within generous safe margins and legible. Keep beautiful believable consumer advertisement quality, warm night photography and layered composition of Image 1. Avoid overly bright blank backgrounds, stiff product-centered catalog styling, sci-fi neon, lots of interface boxes, extra headlines or random decorations. Maintain consistent fictional time-based privacy subscription rules.

P5 Advertisement: white, no antennas

HUSH-Advertisement-White-No-Antennas-Prompt.txt

Create one finished portrait 2:3 HUSH consumer lifestyle advertisement. Image 1 is the existing ad STYLE reference, image 2 is the latest user-selected Figma UI and is authoritative for SCREEN DESIGN. Keep the cinematic upscale cozy night home with amber lamplight, blue city lights through windows, a relaxed young adult woman and resting golden retriever on the sofa, comfortable knit textiles, a laptop and mug, strong white ad typography and three subtle glass graphic bubbles. This is a real fictional consumer product advertisement, not a craft prototype.
CRITICAL PRODUCT CHANGE: HUSH is now an elegant modern fully WHITE device with NO ANTENNAS anywhere. Use internal hidden antennas. The hero device sits visibly on a sideboard at upper right, is large and clearly legible, a sleek slightly tilted landscape rounded-rectangle touch panel in a smooth matte warm-white precision unibody housing, slim minimal bezel, gently rounded transitions, integrated low white foot, subtle underside ventilation hidden from front, no exposed wires, no teal parts, no black bulky housing, no picture-frame mitres, no clay, no protrusions. Contemporary refined 2046 domestic Wi-Fi privacy utility, tangible and believable. No circular Nest device.
SCREEN follows image2: cream/off-white HUSH HOME interface with small logo, small time 8:42 PM, PRIVATE HOURS, dominant black "00:00" left with "remaining", thin circular meter right with "0 HRS", three lower columns "20 / 20 hours", "3 days", "11 devices", dark charcoal footer reading "PROTECTION INACTIVE" and the four active tracking labels. Screen is flush and bright enough to see. Do not put image2's surrounding website background inside screen. Display precisely this EXHAUSTED INACTIVE state, not green old interface and not 59:59.
Typography: elegant widely-spaced HUSH logotype upper left, small upper right "A QUIETER DIGITAL LIFE". Large upper-left headline exactly "Your apps\nknow enough." Below it "Give them some time off." Small tracked line "PRIVATE TIME FOR YOUR CONNECTED HOME".
Three subtle translucent circular AD GRAPHIC overlays around living scene, carefully outside face and device:
"App Tracking" / "Pause with HUSH"
"Browser Profiling" / "Pause with HUSH"
"New Profile Sharing" / "Pause with HUSH"
These are conditional service benefit claims, NOT current status; do not say Paused or Protection On because device currently has zero hours.
Bottom gradient, elegant small line "A little time. Just for you."
Two refined cream information cards. Left exactly:
"HOUSEHOLD"
"20 shared Private Hours"
"every month"
"Included with your subscription"
Right exactly:
"NEED MORE TIME?"
"Add 1 Private Hour"
"$3.99"
"60 minutes · Your connected home"
At bottom tasteful thin brand footer "HUSH / PRIVACY STARTS AT HOME."
Fine print exactly:
"Protection applies on HUSH Wi-Fi during active sessions through participating services. Previously collected data and existing profiles are not removed."
Maintain beautiful photographic depth, anatomically natural person and dog, crisp exact spelling, well-composed margins and exceptionally polished premium editorial typography. Product industrial design must be visibly modern, pristine white and antenna-free. No extra pricing tiers, no invented monthly price, no cyberpunk, no literal floating holograms.

P6 Advertisement: lifestyle magazine page

HUSH-Magazine-Advertisement-Prompt.txt

Use case: ads-marketing.
Create ONE finished single-page MAGAZINE PRINT ADVERTISEMENT for HUSH, portrait A4-ish 210:297 aspect ratio, high resolution. Image 1 is an established campaign style reference only; image 2 is the authoritative cream-and-charcoal HUSH screen visual reference. This is a new premium magazine layout, not an edit that must preserve previous composition.
Deliver a flat rectangular page, edge to edge, front-facing artwork ready to place as an ad in a lifestyle/design magazine. Do NOT show a magazine object, page curls, hands, a spread mockup, editorial article, masthead, page numbers, guides or production notes.

Art direction: sophisticated emotionally welcoming consumer advertising in a believable near future. Beautiful architectural lifestyle photography and meticulously composed typography, generous negative space, expensive restrained layout. Use a coherent grid. Remove all floating glass bubbles, UI pricing cards and icon grids from the earlier campaign. One powerful headline, one exceptionally photographed domestic scene, discreet offer and meaningful fine print. The advertising mood is calm and ordinary, making limited privacy feel like a household utility.

Photography occupies upper 75% full bleed. A warm amber-lit contemporary home at blue hour with soft dark window reflections and natural textures. A relaxed young adult woman seated on a textured sofa in the middle distance, with a golden retriever resting beside her, both naturally posed and

unobtrusive. A laptop can rest closed nearby. A modern WHITE HUSH household router sits prominently on a walnut side table nearer the camera at right, large enough that the screen can be read, physically supported and beautifully integrated in the room, not a separate floating product render. It should feel intimate and credible, not a dramatic dystopia. Natural depth, crisp device, gentle background softness, no exaggerated blur.

Product: refined manufactured white unibody home Wi-Fi privacy router with integrated landscape touchscreen, softly rounded corners, slim uniform white bezel, shallow depth, discreet integrated support foot. NO EXTERNAL ANTENNAS whatsoever. No coloured clay, craft frame, mitered joints, neon, exposed wires, or holograms. Small HUSH wordmark on lower edge. Realistic high-end electronics materials and perspective.

Screen follows image2: cream main area, black/dark-charcoal status footer. Small HUSH HOME header and 8:42 PM, prominent PRIVATE HOURS / 00:00 / remaining at left, thin circle at right with 0 HRS, bottom info 20/20 hours used / renewal 3 days / 11 devices. Footer says PROTECTION INACTIVE and tracking categories Active. Accurate digital UI, no webpage background or second external frame. Do NOT label protection active or show 59:59. The advertisement offers additional private time while the device's allowance is depleted.

Text layout and EXACT copy:
Top at safe 6% margins: moderately sized spaced "HUSH", with small right aligned "HOME PRIVACY UTILITY".
Below in the dark negative space at upper left, huge elegant cream sans-serif headline:
"Your apps
know enough."
Immediately beneath, smaller lighter-weight line:
"Give them some time off."
No other copy overlays the person or device.

Lower 25% of page is warm ivory uncoated-paper-looking space. Carefully aligned editorial typography, not web UI.
Main left text:
"20 Private Hours.
One connected home."
Below in small body type:
"Choose when to pause new tracking across your home.
20 shared hours included each month with HUSH Home."
Right aligned offer, visually separated only by a fine vertical rule:
"Need a little longer?"
"Add 1 Private Hour"
"$3.99"
At bottom, a slim horizontal hairline and small spaced brand signoff:
"PRIVACY STARTS AT HOME."
Very small but readable legal line:
"Protection applies on HUSH Wi-Fi during active sessions through participating services. Previously collected data and existing profiles are not removed."

Use accurate spelling, balanced headline line breaks, cream/charcoal typography, warm amber and navy photography. No recurring monthly price, no 80-hour tier, no unlimited claim, no invented web address, no QR code. All important content inside safe margins. The result must look like a considered full-page printed magazine ad with subtle unsettling commercial terms, not a dashboard, generic AI marketing collage, or product brochure.

P7 Magazine insert v2

HUSH-Magazine-Insert-v2-Prompt.txt

Edit the attached HUSH advertisement poster (poster-v1.jpg) with the image generation tool. Keep the overall layout, colours (deep red #A31D1D, cream background, black), headline typography, the device design and all large text EXACTLY as they are. Make ONLY these changes:

1. "How It Works" (bottom-left red panel): replace the three step pictures with flat SILHOUETTE pictograms in a single solid dark red, no shading, no skin tone, no gradients, like airport/IKEA signage:
- Step "Track Usage": silhouette of a person seated at a laptop.
- Step "Take a Pause": silhouette of a finger pressing a pause button (two bars) on the HUSH device.
- Step "Get Your Time Back": silhouette of a person relaxing with arms behind the head.
Keep the white rounded cards, the arrows and the step labels.

2. Less small text: under the three right-hand callouts keep ONLY the bold headings "Simple Control", "Connected Home" and "Privacy by Design"; delete the smaller description lines beneath them. Keep the red callout lines.

3. Large device image on the right: remove the black band at the bottom of its screen. The whole screen should be the same light cream colour; keep "PROTECTION INACTIVE" (with the small red dot) and "NOW" as dark text on the cream background.

4. Back of the device (both the small line icon at the top-right and the "BACK VIEW" product image): remove the speaker/microphone grille completely. Instead show a neat row of ports on the back: two network (RJ45 Ethernet) ports and one small USB-C power port, with a network cable plugged into one port in the BACK VIEW image. There must be no speaker or microphone holes anywhere on the device (the product does not listen).

Keep the poster the same size and aspect ratio (portrait). Spell every word correctly. Save the result as poster-v2.png in the current folder. Do not create other files.

P8 Magazine insert v3 (new layout)

HUSH-Magazine-Insert-v3-Prompt.txt

Edit the attached HUSH advertisement (layout-v3-base.jpg) with the image generation tool. This is a magazine/catalogue advertisement insert for a product sold in the near future (around 2046). Keep the layout, the red/cream/black palette, the big "HUSH" logo, the headline "Your apps know enough. Give them some time off.", the large hero device, the "20 Private Hours. One connected home." block, "Need a little longer? Add 1 Private Hour $3.99", and the faint "HUSH" watermark EXACTLY where they are. Make ONLY these changes:

1. "How It Works" (bottom-left, 3 cards): redraw the three card illustrations in a more refined, minimal, near-future style: very clean thin-line (hairline) illustration, monochrome warm grey with a single red #C0272D accent, soft frosted-glass card background, generous whitespace, no faces or facial details, no heavy outlines, no cartoon look. Same three steps and labels:
1 "Track Usage": a minimal figure (simple abstract head and shoulders) with a slim laptop, a thin red line chart rising from the screen.
2 "Take a Pause": a fingertip touching a glowing red pause button on the HUSH device's screen (same white device design as the hero).
3 "Get Your Time Back": a minimal reclining figure with arms behind the head, with a thin circular red progress ring behind it.
Keep the numbered red circles, the step titles and the small red arrows between cards.

2. Hero device screen: remove the black band at the bottom of the screen. The whole screen must be the same light cream colour; keep the row "PROTECTION INACTIVE" (small red dot) and "NOW", and the four status items (App Tracking / Browser Profiling / Device Data Sharing / Ad Personalisation — Active) as dark text on cream.

3. "BACK VIEW" product image: remove the speaker/microphone grille completely. Show a clean row of ports on the back instead: two network (RJ45 Ethernet) ports and one small USB-C power port, with one network cable plugged in. No speaker or microphone holes anywhere (the product does not listen).

4. "FRONT VIEW" product image: the screen should be switched on, showing the same cream HUSH home screen as the hero (tiny, simplified), not a black glass screen.

5. Less small text and in-world wording: replace "Concept" with "Meet HUSH" and replace "A home device for real privacy." with "Private time for your home." Keep "PRIVACY. CONTROL. BALANCE." top right.

Keep the same portrait size and aspect ratio. Spell every word correctly. Save as poster-v3.png in the current folder. Do not create other files.

P9 Magazine insert v4 (How It Works in 3D)

HUSH-Magazine-Insert-v4-Prompt.txt

Edit the attached poster (poster-v3.png) with the image generation tool. Change ONLY the three illustrations inside the "How It Works" cards (bottom-left). Everything else — every word, the layout, the hero device, device views, prices, the numbered red circles, step titles, arrows, watermark — must stay exactly the same.

The current card illustrations look hand-drawn / sketchy. Replace them with crisp, polished, photorealistic 3D product renders — NOT hand-drawn, NOT sketch, NOT line art, NOT cartoon, no people. Same visual language as the hero device: matte warm-white/cream plastic and soft-touch materials, a single red #C0272D accent glow, soft studio lighting, gentle shadows on a light background, premium near-future consumer-tech catalogue feel (like an Apple or Nothing product page). Each object small and centred in its card, with clean space around it:
1 "Track Usage": a slim matte white laptop, half open, its screen showing a minimal cream dashboard with a thin red rising line graph.
2 "Take a Pause": the white HUSH device (same design as the hero, landscape screen, rounded body, kickstand) at a three-quarter angle, its screen showing one large glowing red pause button.
3 "Get Your Time Back": a matte white rounded hourglass, or a soft white dial with a glowing red ring arc returning to full — calm and minimal.

Keep the same portrait size. Save as poster-v4.png in the current folder. Do not create other files.

P10 Magazine insert v5 (type, copy, fine print)

HUSH-Magazine-Insert-v5-Prompt.txt

Edit the attached poster (poster-v4.png) with the image generation tool. Keep the layout, all images (hero device, red circle, close-up, device views, the three 3D How It Works renders), colours and watermark exactly as they are. Make ONLY these typography and copy changes:

1. NO ITALICS ANYWHERE. Re-set every piece of text in an upright (roman) clean geometric sans-serif. Use weight contrast instead of slant: headlines bold/heavy, body text light/regular. This includes the big red "HUSH" logo (keep it big, bold and red, but upright), "Your apps know enough." (bold upright), "Give them some time off." (light upright), section titles "Meet HUSH", "Device Views", "How It Works", the step titles, "20 Private Hours.", "One connected home.", "Need a little longer?", "Add 1 Private Hour", "$3.99", and ALL text on the device screens (hero and front view) — the screen UI must be upright and light like a real app interface.

2. How It Works step titles: change to
1 "Choose a Plan"
2 "Take a Pause"
3 "Get Your Time Back"

3. Top-right tagline: "PRIVACY. CONTROL. BALANCE." — no space before each full stop.

4. Fine print: make the big number read "20 Private Hours.*" with a small asterisk. Add a fine-print block at the very bottom of the poster (small, light grey, upright, 2 lines, left aligned under the How It Works section, above or overlapping the faint watermark area so it stays readable):
"*HUSH Home plan $19.99/month includes 20 shared Private Hours. Additional hours $3.99 each (60 minutes, whole home).
Protection applies on HUSH Wi-Fi during active sessions through participating services. Previously collected data and existing profiles are not removed."

Spell every word exactly as given. Same portrait size. Save as poster-v5.png in the current folder. Do not create other files.

P11 Magazine insert v5b (remaining italics)

HUSH-Magazine-Insert-v5b-Prompt.txt

Edit the attached poster (poster-v5.png) with the image generation tool. Change NOTHING except making these remaining italic texts fully upright (roman, no slant), keeping their size, weight, colour and position:
- Section titles "Meet HUSH", "Device Views", "How It Works" (bold, upright).
- Step 3 title "Get Your Time Back" (both lines upright, same as "Choose a Plan").
- ALL text on the hero device screen and the small FRONT VIEW screen: "HUSH HOME", "8:42 PM", "PRIVATE HOURS", "00:00", "remaining", "0", "HRS", "MONTHLY USAGE", "20 / 20 hours", "NEXT RENEWAL", "3 days", "CONNECTED", "11 devices", "PROTECTION INACTIVE", "NOW", "App Tracking", "Browser Profiling", "Device Data Sharing", "Ad Personalisation", "Active". Screen text must be upright, light and regular weight like a calm, real app interface (thin upright numerals for 00:00).
Leave the faint background "HUSH" watermark as it is. Everything else (images, layout, other text, fine print) stays identical. Spell every word exactly. Save as poster-v5b.png in the current folder. Do not create other files.

P12 Magazine insert v5c (back view, final)

HUSH-Magazine-Insert-v5c-Prompt.txt

Edit the attached poster (poster-v5b.png) with the image generation tool. Change ONLY the "BACK VIEW" product image (bottom row of Device Views, right). Everything else must remain identical.

Problem: the ports are blocked by the kickstand and the plugged-in cable. Redraw the back view as a clean 3D product render, same matte warm-white material and lighting as the other views:
- The device seen straight from behind, standing on its kickstand.
- The kickstand attaches LOW, near the bottom edge, and is narrow, so it covers nothing.
- A neat recessed port panel in the upper-middle of the back, fully visible: two RJ45 Ethernet ports and one USB-C power port, side by side, clearly readable, with a tiny embossed HUSH "H" logo above them.
- One thin white network cable plugged into the left Ethernet port, routed sideways and then down off the edge, NOT crossing the other ports.
- No speaker or microphone holes.
Keep the "BACK VIEW" label below it. Save as poster-v5c.png in the current folder. Do not create other files.

P13 Quick-start guide illustrations, set 1

HUSH-Instructions-Illustrations-1-Prompt.txt

Create 7 minimalist instruction-manual line illustrations for a fictional home device called HUSH (a home Wi-Fi router with a built-in landscape touch screen). The attached photo shows the device: a white rectangular body that stands upright on a desk like a thick picture frame, a landscape screen inset in the upper part, and a wide plain border below the screen where the wordmark sits.

Use the image generation tool. Style for ALL images (must be consistent, like an IKEA / Apple quick-start guide):
- Pure white background, single-weight black line art (about 3px at 1024px), no shading, no gradients, no colour except ONE accent colour, dark green #2E4238, used sparingly (e.g. a button or a small highlight).
- Absolutely NO text, letters, numbers or logos anywhere in the images (leave screens with simple icons/shapes only). Leave the area below the screen blank.
- Square 1024x1024, subject centred with generous white margin.
- No antennas on the device.

Images (save each as PNG with exactly these filenames into the folder instructions/img relative to the working directory):
1. inbox.png - flat-lay "in the box": the device lying face up, a small power adapter with cable, a flat network cable, a small folded card.
2. step1-plug.png - the device seen from behind at three-quarter angle on a desk, a power cable and a network cable plugged into ports at the back, the network cable going to a wall socket.
3. step2-join.png - a hand holding a smartphone in front of the device; the device screen shows a QR-code-like square pattern; small Wi-Fi arcs between phone and device.
4. step3-start.png - the device front view, its screen shows a large circle button (filled accent green) with a play triangle, a fingertip touching it.
5. step4-pause.png - the device front view, screen shows a circle button with two vertical pause bars, a fingertip touching it, and a small hourglass icon floating beside the device.
6. step5-report.png - a hand holding a smartphone showing a simple ring chart and three horizontal bars (no text).
7. empty.png - the device front view with its screen showing an EMPTY thin circular ring (nothing left); next to it a laptop and a phone that still show Wi-Fi arcs, and small dotted lines with tiny eye icons drifting away from the laptop and phone (data still travelling).

After saving, list the files with their sizes. Do not create any other files.

P14 Quick-start guide illustrations, set 2

HUSH-Instructions-Illustrations-2-Prompt.txt

Create 2 more minimalist instruction-manual line illustrations, matching EXACTLY the style of the existing images in instructions/img (look at instructions/img/step2-join.png and step4-pause.png first): pure white background, single-weight black line art, no shading, one accent colour dark green #2E4238 used sparingly, absolutely NO text, letters or numbers, square 1024x1024, generous margins.

Use the image generation tool. Save as PNG into instructions/img with exactly these filenames:
1. step-plan.png - a hand holding a smartphone; the phone screen shows three plan cards side by side as simple rectangles (small, medium, large, the middle one highlighted with the accent green outline), and below them a wide filled accent-green button; a small padlock icon that is shown OPEN floats next to the phone (payment unlocks the service).
2. household.png - two smartphones held by two different hands, facing each other on left and right. The left phone shows a large pause icon (two bars). The right phone shows a notification card with two rounded buttons, one filled accent green and one outline. A small dotted arc connects the two phones. Behind them, small and faint, the HUSH device outline (white frame with a landscape screen, no antennas).

After saving, list the files. Do not modify any other files.
